

Go to the Movies Without Leaving Home

Simply put, home theater is a high quality audio and video entertainment center that creates the movie experience right in your own home. A home theater can be as elaborate or as simple as you wish – from a specially designed and equipped “theater” to an ordinary den or living room. In fact, all the comforts of old-time movie houses and luxury screening rooms are available for home theater – with the added benefit of today’s cutting-edge technology. Our installers specialize in designing such systems and recommending the best equipment at various price levels.

To enjoy the pleasures of a custom installation, you need quality equipment and a well-designed, professional installation. The experts in our company know what’s new and what’s best, and we have the technical expertise and experience to design the best system for your budget.

We are members of the Custom Electronic Design & Installation Association (CEDIA), the only global organization of experienced custom designers and installers. We are licensed, insured professionals who work directly with homeowners, or with their architects, builders, and interior designers.
